What the system does

Godrej WMS runs the daily life of a warehouse: goods come in, the system chooses where they go, staff confirm, stock is picked oldest-first, and every step is reported and auditable.

At a glance

AREA	WHAT YOUR TEAM GETS
Dashboard	Live occupancy, stock, put-away queue, today's movement and exceptions in one view.
Inventory Master	Searchable, sortable stock register by material, manufacturing month and pallet position, with Excel export.
Racks & Pallets	Visual pallet map of every rack with a heatmap of how full each location is.
Inward	Manual or Excel goods receipts, automatic location allocation, one-by-one put-away, reject and reallocate.
Pullout	FIFO picking requests with exact locations to pick from; inventory updates only when confirmed.
Inventory Movement	Relocate stock by location or by SKU, with a mandatory reason and a summary before confirming.
Audit Trail	Who changed what and when, with before/after values (Admin).
Reports	Operational reports plus Inward, Pullout, Inventory and Movement analytics, exportable to CSV or Excel.
Guided tours	Built-in step-by-step tours for the whole site and for the Inward, Pullout and Inventory screens.

GETTING AROUND

Dashboard and guided tour

The dashboard is the control tower: current state of the warehouse and the work waiting for attention, refreshed live.

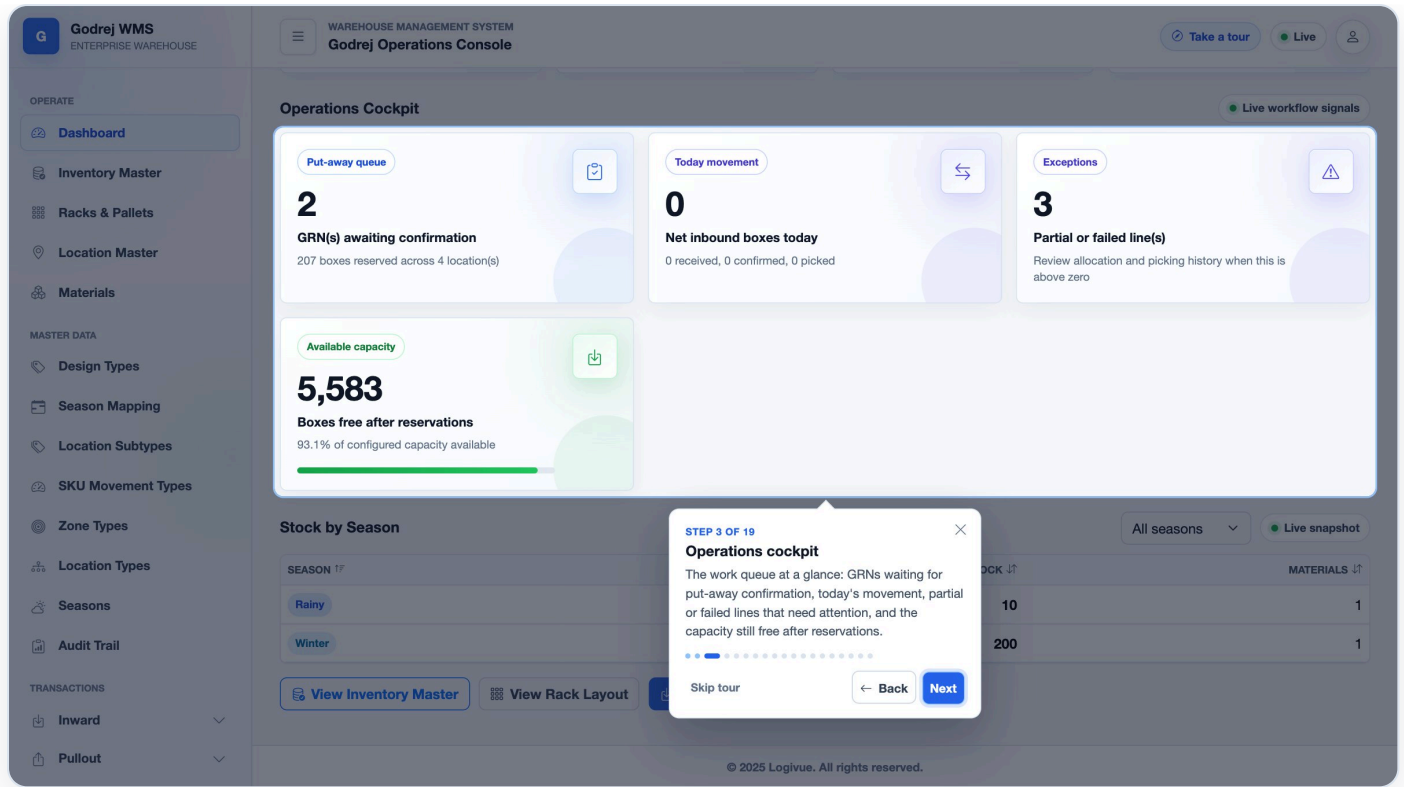

Dashboard with the navigation sidebar, live KPI cards and the Operations Cockpit.

- 1 Sidebar navigation, grouped by Operate, Master Data, Transactions and Reports; each user sees only what their role allows
- 2 KPI cards: pallet occupancy, total stock vs capacity, active racks and active materials
- 3 Operations Cockpit: GRNs awaiting confirmation, today's movement, partial or failed lines, and capacity still free after reservations
- 4 Take a tour: starts the guided walkthrough at any time

- **Put-away queue** shows how many boxes are reserved but not yet confirmed, so nothing is forgotten.
- **Exceptions** counts partial or failed lines, the signal to review allocation or picking history.
- **Available capacity** is calculated after reservations, so it reflects what can really be received.

Guided tour

New users are offered a short tour on first sign-in. It highlights each area of the screen, adapts to the user's role, and can be replayed from the Take a tour button. Inward, Pullout and Inventory Master each have their own Page tour button.

The guided tour spotlights a part of the screen and explains it in place.

Inventory Master, racks and master data

Everyone works from the same picture of what is stored, where, and how much space is left.

Inventory Master: the stock register.

- 1

Search by material code or description, results update as you type
- 2

Filter by design type, velocity, season and active status
- 3

One row per stock batch: material, stock in cartons (CFB), manufacturing month (PKM) and pallet position; click any heading to sort
- 4

Export the current view to Excel

Racks and pallet map

Racks are defined once with their grid and capacity; every pallet position is generated automatically. The pallet map shows each position by level, and a heatmap switch colours locations by how full they are.

Rack A pallet map. Selecting a position shows its capacity, free space, priority and the SKUs placed there.

Master data

Materials, locations, design types, seasons, zone types, location types and movement types are maintained in the system. These settings drive automatic allocation: a material's design type, season and velocity influence where it is placed.

MATERIAL CODE	DESCRIPTION	DESIGN TYPE	RACK	MFT	VELOCITY	BOX WEIGHT	PALLET WEIGHT	SEASON	ACTIVE
40034354	HIT CRK 125ML MRPT5 P90	XOLDH	90	75.00	Fast-moving	13.68 kg	547.20 kg	Platy	Active

A-02-05	-	4	2	Rack	Good	Insecticides	42	40 boxes	0 boxes	Active

Location Master.

Receiving stock and put-away

A goods receipt (GRN) is entered by hand or uploaded from Excel. The system then reserves the best pallet locations, and staff confirm each one as the stock is put away.

1 Enter or upload the receipt

One row per material: quantity in boxes plus the manufacturing year and month (PKM). Excel upload uses a sample template with a month dropdown.

2 Locations are reserved automatically

The same SKU and PKM is topped up first; otherwise empty locations are ranked by zone, distance, level, box weight, velocity and season. Reserved space is held so no one else is sent there.

3 Review the allocation result

Each line shows Allocated, Partial or Failed with the reserved locations. A location can be changed before confirming.

4 Confirm the put-away

Confirm everything at once, or use the put-away screen to confirm one recommended location at a time. Stock posts to inventory on confirmation.

5 Handle exceptions

Reject a GRN with a reason (all reservations are released), or reallocate Partial and Failed lines once space becomes available.

Rejected

No stock was put away

A rejected GRN records the reason, who rejected it and when; all reserved locations are released and nothing is put away.

Pullout: FIFO picking

Request the material and quantity needed. The system proposes exactly which locations to pick from, oldest manufacturing month first, and only updates inventory when the pullout is confirmed.

1

Request the material

Enter lines manually or upload from Excel (material code and quantity).

2

Review the proposed picks

Only good stock in active, good locations is pickable. The oldest PKM is drained first, then column by column, bottom to top (A-01-01, A-01-02, ...).

3

See shortages clearly

Each line shows requested, picked and short quantities, with a remark when stock is insufficient.

4

Confirm the pullout

Inventory is reduced only on confirmation. Unconfirmed pullouts are saved in history for later.

The screenshot shows the 'Picking Request' interface in the Godrej WMS. The interface is divided into a left sidebar with navigation links (Dashboard, Inventory Master, Racks & Pallets, Location Master, Materials, Design Types, Season Mapping, Location Subtypes, SKU Movement Types) and a main content area. The main content area has a header 'PICKING OPERATIONS' and a title 'Picking Request'. Below the title is a sub-header 'Request material quantities and generate FIFO picks from the oldest PKM first.' The main content area is divided into two sections: 'Manual Lines' and 'Bulk Upload'. The 'Manual Lines' section has a form with 'MATERIAL CODE' and 'QTY (BOXES)' fields, a search bar, and buttons for '+ Add Line' and 'Generate Pick Result'. The 'Bulk Upload' section has a form with 'Material Code, Total Stock in CFB' and buttons for 'Upload Excel' and 'Sample Format'. The 'Picking Logic' section at the bottom explains the logic: 'Only good stock in active good locations is pickable; the system drains the oldest PKM first, then nearer/easier locations.' The interface also includes a 'Page tour' button and a 'FIFO by PKM' toggle.

1. Manual Lines: Enter the material and required box quantity.

2. Generate Pick Result

3. Bulk Upload: Material Code, Total Stock in CFB. Upload Excel, Sample Format. Accepted columns: Material Code, Total Stock in CFB. Maximum file size: 10 MB.

4. Picking Logic: Only good stock in active good locations is pickable; the system drains the oldest PKM first, then nearer/easier locations.

Picking Request.

- 1 Manual lines: material and required boxes
- 2 Generate Pick Result (nothing changes in inventory yet)
- 3 Bulk upload from Excel with a sample format
- 4 Picking logic: FIFO by manufacturing month

6

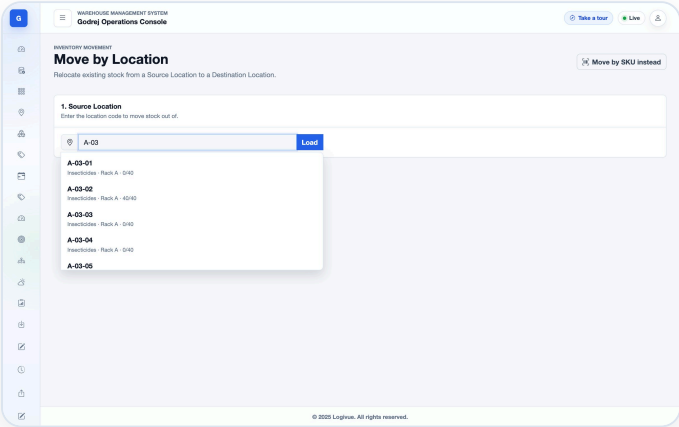

INVENTORY MOVEMENT

Relocating stock with a reason

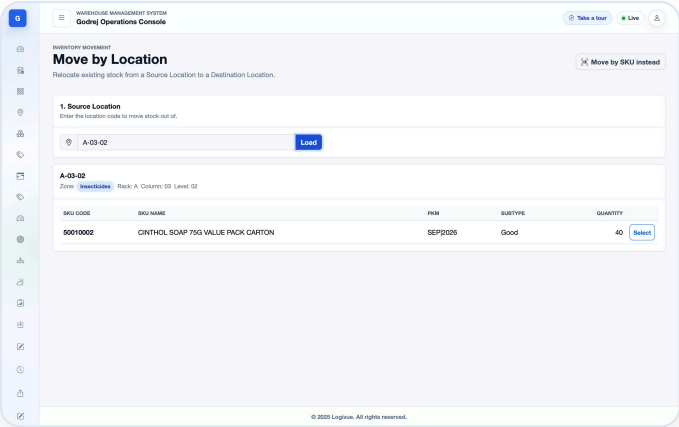

Stock can be moved between locations by location or by SKU. Every movement needs a reason and is shown as a summary before it is confirmed.

Move by Location

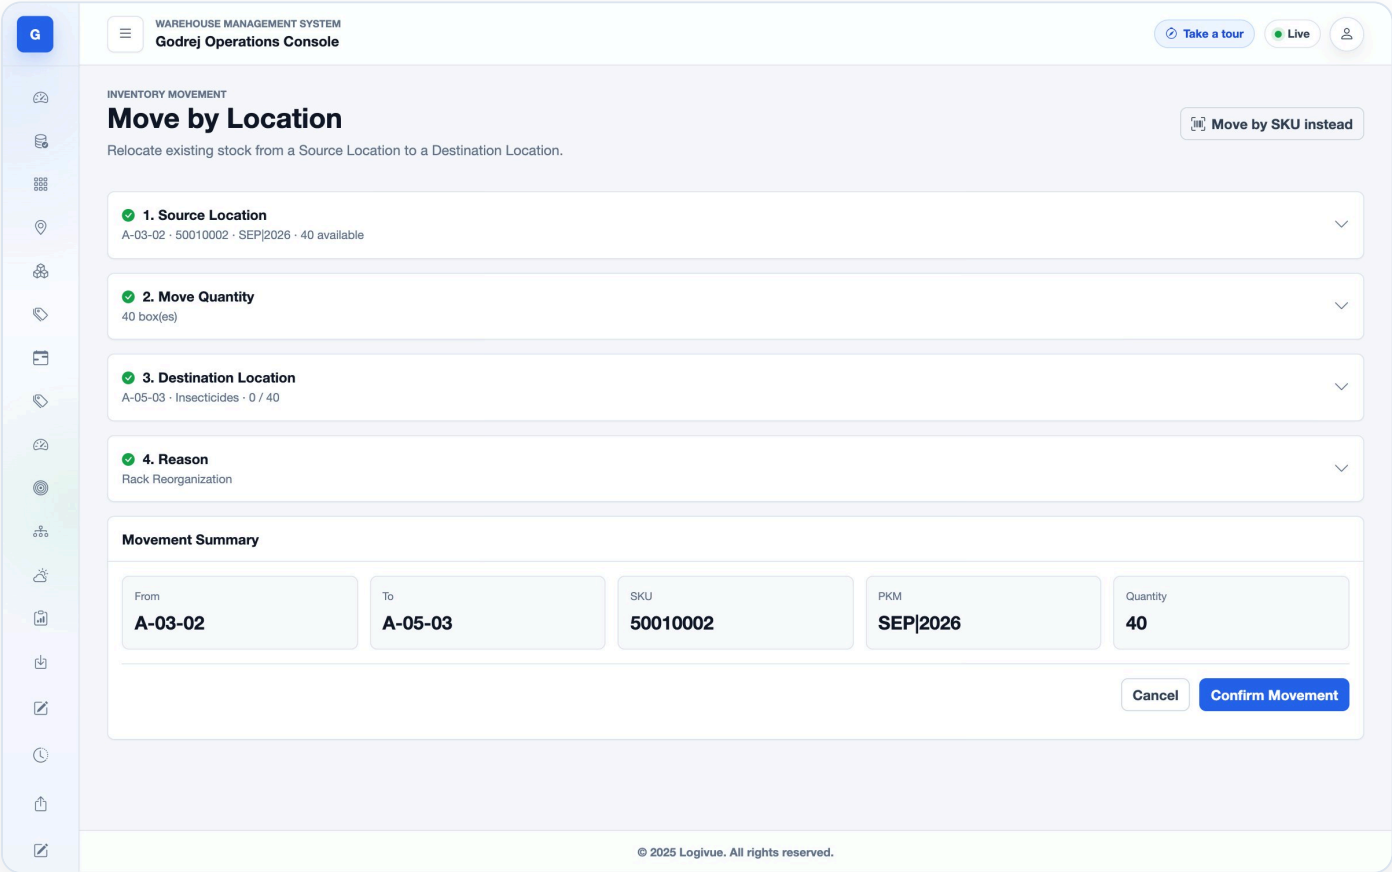

Four short steps: source, quantity, destination, reason. Completed steps collapse into a summary so the screen stays uncluttered, and any step can be reopened to change it.

Searchable location dropdown while typing a source location.

Source location loaded with the stock it holds.

All four steps complete: source, quantity, destination and reason are collapsed, and the Movement Summary (from, to, SKU, PKM, quantity) is shown for confirmation.

Move by SKU

Start from a material and choose one or more of its stock records, giving each a new location and quantity. Columns are sortable.

WAREHOUSE MANAGEMENT SYSTEM

LOCATION	MOVES OUT	MOVES IN	TOTAL MOVES	BOXES OUT	BOXES IN
A-01-01	1	1	2	20	20
A-02-03	1	0	1	20	0
A-01-02	1	0	1	40	0
B-01-02	0	1	1	0	20
A-01-05	0	1	1	0	40

Location churn: the busiest source and destination locations.

Reports never expose more than a user's role allows: pricing (valuation) is Admin-only, and Operators do not see the Reports section.

Why the numbers can be trusted

The rules that protect stock accuracy are part of the system, not something staff have to remember.

FIFO by manufacturing month

Picking always drains the oldest PKM first.

No double-booking

Reserved locations count as occupied, and capacity is never exceeded.

Confirm before it counts

Inward and Pullout change inventory only when confirmed.

Reasons on every move

Inventory Movement requires a reason and shows a summary first.

Conflict protection

Simultaneous edits to the same stock are detected instead of silently overwritten.

Role-based access

Admin, Supervisor and Operator each see only their own areas.

Full audit trail

Changes are recorded with user, time, and before/after values.

Reject and reallocate

Wrong receipts are rejected with a reason; unplaced lines are retried later.

Exports everywhere

CSV or Excel export on registers, history and reports.

Getting started

1 Sign in and take the tour

The tour appears on first sign-in and can be replayed from the top bar.

2 Check the master data

Confirm materials, racks and locations, and zone and location types.

3 Receive a first GRN

Use Inward Entry or upload the sample Excel, then confirm the put-away.

4 Pick and move

Raise a Pullout to see FIFO picks, and try a movement with a reason.

5 Review reports and the audit trail

Confirm the activity you just performed shows up in both.

Screenshots are taken from the running application with sample data. Figures, references and dates shown are

illustrative.
